Some points:

1. Results of queries were very long, so I put each one in a file in the corresponding folder.
2. In query 1 , I used "West Claudia" instead of "Tehran".
3. In query 3 , I used 9 instead of 10.
4. According to my database , query 6 does not provides any output , but I'm sure that the query is correct.
5. In query 7 , I used 3 instead of 10.
6. In query 9 , I used 200 instead of 100000.
7. In query 10 , I used "laborum" instead of "Sa'adatAbad".
8. According to my database , query 11 does not provides any output , but I'm think that the query is correct.
9. My MYSQL does not supports 'with' clause , so wherever I used 'with' clause, I wrote query in nested format too.
10. Instead of generating data manually, I used prepared fake data for my database.
